

econova

The organic mineral complex fertiliser for all plants

Eco Nova, the new revolution in turf

The complete plant growth fertiliser, bio-stimulater & carbon control solution. A bio-fertiliser based on the need for organic mineral complexes in the soil. Manufactured by building a matrix to hold minerals, organic substances and clay in bio-organic chelates.

- Acts as a sophisticated soil conditioner
- Reduces early frost effects
- Greatly reduces leaching and subsequent contamination of watercourses
- Reduces

Eco-Nova Bio-Fertilisers contain the main building blocks for plant growth;

N (nitrogen),
P (in the form of phosphates P₂O₅) and
K (in the form of potash K₂O).

In addition they contain trace elements including

Fe (iron),
Mg (magnesium),
Mn (manganese),
Cu (copper),
Zn (zinc),
Bo (boron),
Mo (molybdenum),
Ca (calcium) and
S (sulphur).

We are able to inject the fertilizer directly into the root system where it will be the most beneficial.

Eco Nova is 1 product that will save you time, money and most importantly your turf.
